Accounting Jan 24 2023 Accounting: Tools for Business Decision Making, 7th Edition is a two-semester financial and managerial accounting course designed to show students the importance of accounting in their everyday lives. Emphasizing decision-making, this new edition features relevant topics such as data analytics as well as the time-tested features that have proven to be of most help to students.

Financial Accounting Sep 27 2020 "The authors carefully considered how to thoughtfully and meaningfully integrate data analytics into

the financial accounting course, and are pleased to provide the following data analytics resources. Data Analytics and Decision-Making The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. Data analytics involves analyzing data, often employing both software and statistics, to draw inferences. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies"--
Management and Cost Accounting Oct 09 2021 Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of

management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
