This extraordinary book explains the engine that has catapulted the Internet from backwater to ubiquity—and reveals that it is sputtering precisely because of its runaway success. With the unwitting help of its users, the generative Internet is on a path to a lockdown, ending its cycle of innovation—and facilitating unsettling new kinds of control. iPods, iPhones, Xboxes, and TiVos represent the first wave of Internet-centered products that can't be easily modified by anyone except their vendors or selected partners. These “tethered appliances” have already been used in remarkable but little-known ways: car GPS systems have been reconfigured at the demand of law enforcement to eavesdrop on the occupants at all times, and digital video recorders have been ordered to self-destruct thanks to a lawsuit against the manufacturer thousands of miles away. New Web 2.0 platforms like Google mash-ups and Facebook are rightly touted—but their applications can be similarly monitored and

eliminated from a central source. As tethered appliances and applications eclipse the PC, the very nature of the Internet—"generativity," or innovative character—is at risk. The Internet's current trajectory is one of lost opportunity. Its salvation, Zittrain argues, lies in the hands of its millions of users. Drawing on generative technologies like Wikipedia that have so far survived their own successes, this book shows how to develop new technologies and social structures that allow users to work creatively and collaboratively, participate in solutions, and become true "netizens." Discusses how to set up defenses against hackers and online con artists, encryption methods, anonymizer software, spam, viruses, identity theft, firewalls, and ways to safeguard online purchases. In *Romancing the Internet: Producing and Consuming Chinese Web Romance*, Jin Feng examines how shifting social cultural forces and gender codes in contemporary Chinese society have shaped the production and consumption of Chinese popular romance on the Internet. We are delighted to introduce the proceedings of the first edition of the International Conference on Science and Technology (ICoST) that was held in Claro Hotel, May 2-3, 2019. It was organized by Faculty of Science and Technology, Universitas Islam Negeri Alauddin Makassar in partnership with Forum Dekan Fakultas Sains dan Teknologi PTKIN. The theme of the ICoST is "Roles and Challenges of Science and Technology in Guaranteeing Halal Products in the Industrial Revolution 4.0". The Indonesian government has begun to respond to this industrial change by launching the roadmap of 'Making Indonesia 4.0' as a strategy to ease Indonesia's steps to become one of the new powers in Asia in April 2018. This roadmap provides a clear direction for the movement of the national industry in the future, including a focus on developing priority sectors that will become Indonesia's strength towards Industry 4.0. The proceedings of ICoST contain the scientific research, written by the academician researchers, practitioners, and government elements who

have the same thoughts about the effort to develop the society's ability to adapt the advancement of science and technology in the global competition to face the industrial revolution 4.0. We are also very grateful to all keynote speakers and committee members, willing to act as referees, their time and efforts to keep our conference going well. In the future, we expect the ICoST will be able to provide another scientific atmosphere and stimulate more participants to join this conference.

The Internet in Everyday Life is the first book to systematically investigate how being online fits into people's everyday lives. Opens up a new line of inquiry into the social effects of the Internet. Focuses on how the Internet fits into everyday lives, rather than considering it as an alternate world. Chapters are contributed by leading researchers in the area. Studies are based on empirical data. Talks about the reality of being online now, not hopes or fears about the future effects of the Internet. First Published in 1999. Routledge is an imprint of Taylor & Francis, an informa

company. The volume presents a collection of peer-reviewed articles from the 9th KES International Conference on Intelligent Decision Technologies (KES-IDT-17), held in Vilamoura, Algarve, Portugal on 21–23 June 2017. The conference addressed critical areas of computer science, as well as promoting knowledge transfer and the generation of new ideas in the field of intelligent decision making, project management and data analysis. The range of topics addressed includes methods of classification, prediction, data analysis, decision support, modeling, social media and many more in such diverse areas as finance, linguistics, management and transportation. The Internet is now an integral part of contemporary life, and linguists are increasingly studying its influence on language. In this student-friendly guidebook, leading language authority Professor David Crystal follows from his landmark bestseller *Language and the Internet* and presents the area as a new field: Internet linguistics. In his engaging trademark style, Crystal addresses the online linguistic issues that affect us on a daily basis, incorporating real-life examples drawn from his own studies and personal involvement with Internet companies. He provides new linguistic analyses of Twitter, Internet security, and online advertising, explores the evolving multilingual character of the Internet, and offers illuminating observations about a wide range of online behaviour, from spam to exclamation marks. Including many activities and suggestions for further research, this is the essential introduction to a critical new field for students of all levels of English language, linguistics and new media. Bring your classroom into the 21st century

However, very few studies in the ICT-for-development field examine the direct connection between ICTs and socioeconomic growth. *Information and Communication Technologies in Nigeria: Prospects and Challenges for Development* is a compelling account of the development of ICTs in Nigeria. It examines the ICT policy framework and the societal context within which applications of the technologies emerged and highlights the potentials of ICTs in socioeconomic development. However, this book also demonstrates, through interviews and case studies, that ICTs are not the panacea to underdevelopment; constraining factors in different countries can limit their capacity to

succeed. The author employs a rare multidisciplinary approach that makes the book appealing and accessible to a diverse range of readership. Numerous people have been introduced to the Internet through Ernest Ackermann's workshops. He has written a hands-on book that reflects his experiences and insights in teaching others to navigate the Internet. He teaches you how to use Internet services via step-by-step examples and covers the major World Wide Web interfaces--Mosaic, Lynx, and Netscape. A gentle introduction for newcomers. Based on four years of experience teaching computers to 8-12 year olds, media scholar Ellen Seiter offers parents and educators practical advice on what children need to know about the Internet and when they need to know it. The Internet Playground argues that, contrary to the promises of technology boosters, teaching with computers is very difficult. Seiter points out that the Internet today resembles a mall more than it does a library. While children love to play online games, join fan communities, and use online chat and instant messaging, the Internet is also an appallingly aggressive marketer to children and, as this book passionately argues, an educational boondoggle. Reliable performance evaluations require the use of representative workloads. This is no easy task since modern computer systems and their workloads are complex, with many interrelated attributes and complicated structures. Experts often use sophisticated mathematics to analyze and describe workload models, making these models difficult for practitioners to grasp. This book aims to close this gap by emphasizing the intuition and the reasoning behind the definitions and derivations related to the workload models. provides numerous examples from real production systems with hundreds of graphs. Using this book, readers will be able to analyze collected workload data and clean it if necessary derive statistical models that include skewed marginal

distributions and correlations, and consider the need for generative models and feedback from the system. The descriptive statistics techniques covered are also useful for other domains. Parents feel that a fast-paced lifestyle requires constant hurry to complete the next task and causes them to lose control over how time is spent. This environment makes it more difficult to build relationships with their children and to teach them to honor priorities, care about others, maintain health, manage conflicts, and achieve balance. Our cross-cultural studies of families have found that the most important gift parents can give their children is spending time together. Being together without multitasking or other interruptions increases sharing, in depth conversations, learning, and closeness. This book shows how to prepare children for school by providing the following experiences.

- Parents have a new obligation, introducing their children to the Internet. Parent and child Internet visits are presented in each chapter with guidelines for teaching online. Information about child development stages are provided for parents on additional Web sites. You can link to these Web sites at Information Age Publishing (<http://www.infoagepub.com/strom-young-children>)
- Parents and children spend more time watching television together than doing other things. Conversation questions are provided as a tool that parents can use to find out how children interpret events they see and detect learning needs.
- Children will more likely become creative adults if they receive support for imagination and curiosity. Examples illustrate the merits of playing alone, playing with friends,

and pretending with parents. • Boys and girls like bedtime stories and are motivated to read when they see parents read for pleasure. Children's books that are recommended for discussion reinforce values parents hope to convey. • Parents are responsible for teaching foundation lessons about socialization. Methods are described to foster development of child self-control, getting along with others, managing fears, and setting goals. • Parents benefit from feedback on how well their goals and practices reflect principles of child development. A parent self-evaluation form includes questions and answers to identify personal strengths and learning needs. This book is for parents, grandparents, and other educators of young children ages 3 to 8.
