Teach Students How to Learn Mar 28 2021 Miriam, a freshman Calculus student at Louisiana State University, made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third—These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Saundra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple, straightforward strategies to use, they can significantly increase their learning and performance. For over a decade Saundra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years, ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Saundra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Saundra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.

Adequate Yearly Progress Apr 16 2020 A debut novel told with humor, intelligence, and heart, a “funny but insightful look at teachers in the workplace...reminiscent of the TV show *The Office* but set in an urban high school” (The Washington Post), perfect for fans of Tom Perrotta and Laurie Gelman. Roxanna Elden’s “laugh-out-loud funny satire” (Forbes) is a brilliantly entertaining and moving look at our education system. Each new school year brings familiar challenges to Brae Hill Valley, a struggling high school in one the biggest cities in Texas. But the teachers also face plenty of personal challenges and this year, they may finally spill over into the classroom. English teacher Lena Wright, a spoken-word poet, can never seem to truly connect with her students. Hernan D. Hernandez is confident in front of his biology classes, but tongue-tied around the woman he most wants to impress. Down the hall, math teacher Maybelline Galang focuses on the numbers as she struggles to parent her daughter, while Coach Ray hustles his troubled football team toward another winning season. Recording it all is idealistic second-year history teacher Kaytee Mahoney, whose anonymous blog gains new readers by the day as it drifts ever further from her in-class reality. And this year, a new superintendent is determined to leave his own mark on the school—even if that means shutting the whole place down.

A Guide to Teaching in the Active Learning Classroom Mar 08 2022 While Active Learning Classrooms, or ALCs, offer rich new environments for learning, they present many new challenges to faculty because, among other things, they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed. The importance of learning how to use these classrooms well and to capitalize on their special features is paramount. The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls. This book provides an introduction to ALCs, briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based, practical guidance on how to use these unfamiliar spaces effectively. Among the questions this book addresses are: • How can instructors mitigate the apparent lack of a central focal point in the space? • What types of learning activities work well in the ALCs and take advantage of the affordances of the room? • How can teachers address familiar classroom-management challenges in these unfamiliar spaces? • If assessment and rapid feedback are critical in active learning, how do they work in a room filled with circular tables and no central focus point? • How do instructors balance group learning with the needs of the larger class? • How can students be held accountable when many will necessarily have their backs facing the instructor? • How can instructors evaluate the effectiveness of their teaching in these spaces? This book is intended for faculty preparing to teach in or already working in this new classroom environment; for administrators planning to create ALCs or experimenting with provisionally designed rooms; and for faculty developers helping teachers transition to using these new spaces.

It Works for Me, Flipping the Classroom Jan 26 2021 Our primary goal in assembling this collection is to convince faculty to experiment with the "flipped" classroom. Given the tectonic shift, providing educators with an abundance of electronic resources, as well as the nature of today's students, every faculty member needs to consider the possibilities of the flip. Now that active learning has been demonstrated by research to be more effective than the pure sage-on-the-stage paradigm, flipping is a natural outgrowth with its recognition that classroom time needs to be dedicated to activities by the instructor, the individual students, and groups that promote a deeper learning of the material. This book offers a guide for those faculty members wishing to make the first steps, taking the instructor from preparation for the flipped class experience through actual out-of-class assignments, in-class activities, electronic resources available for support, and even assessment of student performance and class effectiveness.

Practical Advice for Teachers of Heritage Learners of Spanish Jan 06 2022 This collection of personal essays addresses an urgent problem in language education: how to teach heritage learners of Spanish. This is a challenge for which most Spanish teachers have never been truly prepared. From the unique issues of identity that many heritage learners face (and how that impacts our classes) to the unexpected obstacles that our students face in school, we discuss surprises that we have confronted and highlight our best strategies. We describe difficulties that we have faced in our classrooms, including the initial placement of students in a heritage learners program, learning to manage highly differentiated classes, and structuring day to day lessons that engage our students. Rather than a group of scholarly essays describing ideal practices, these essays depart from the often imperfect teaching context of each individual teacher. Together our essays resonate with observations that may at times contradict each other, perhaps inviting solutions that oppose each other, but always opening doors to a world of possibilities for the teacher new to teaching heritage learners. The profits from sales of this collection of essays are reinvested into the classroom libraries of the contributors.

The Knowledge Gap Feb 24 2021 The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.
