**1970 Chevelle SS in Detail No. 1** May 22 2022 " Find all the details on the storied 1970 Chevrolet Chevelle SS, including the 396- and 454-ci big-block engines, from the pages of this comprehensive book. After the General Motors displacement ban ended for the 1970 model year, Chevrolet put new skin on the Chevelle and a new powerplant under the hood: the vaunted LS6 454 with 450 hp. Today, the 1970 Chevelle SS 454 is viewed as one of the most iconic automobiles ever produced on American soil. SS 396 and 454 Chevelles command a premium at auction and are one of the most coveted muscle cars ever produced. The Chevrolet Chevelle undoubtedly has one of the largest followings of any of Detroit's muscle cars. It was a chassis for the Everyman, offered in Malibu and Chevelle form with four-door sedans, station wagons, two-door SS performance models, and even truck-style beds available. It was the midsize Chevy chassis for all purposes. For many years, until 1970, it existed among midsize offerings as a fairly capable machine. Each volume in the In Detail series provides an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, and an in-depth study of all hardware and available options, as well as an examination of where the car is on the market today. Also included are paint and option codes, VIN and build tag decoders, as well as production numbers."

*Iron and Steamship Archaeology* Sep 13 2021 In the early 1980s the author was asked to investigate the newly discovered wreck of the Xantho, an iron screw steamship active off the Australian coast during the period 1848 to 1872, and to develop a strategy to stop

the looting that was occurring at the site. This relatively straightforward assignment turned into a long-term research program for applying maritime archaeology to the conservation of iron-hulled wrecks.

Chevrolet's marketing campaign for the 1969 Chevelle changed the SS 396 to an option instead of its own series. For this year only, the SS 396 Equipment option was offered on four different bodystyles (coupe, sport coupe, convertible, and sedan pickup) and in two series (300 Deluxe and Malibu). The clean styling and extended production year saw sales at 86,307 units sold with the SS 396 Equipment option, the all-time high watermark. The SS 396 equipment option offered three engine packages: those with 325, 350, and 375 hp--the latter being available with an aluminum-head option (L89). Two SS 396-specific paint colors (Daytona Yellow and Huger Orange) were available at a \$42.15 charge adding a splash of brightness to the color chart palette. The year 1969 was also the first time that an SS 396 Chevelle came with its own special wheels. Leading Chevelle specialists contributed data to this book, certifying that the information presented is accurate and ensuring that 1969 Chevrolet Chevelle SS 396: Muscle Cars In Detail No. 12 will be a valued resource guide for years to come.

Effect of Aroused Testing Conditions on the Measurement of Fear of Failure Feb 04 2021 The Thematic Apperception Test (TAT)

was administered to 38, male, high school Ss under both neutral and aroused conditions. The TATs were scored for fear of failure (FF) motivation as measured by the Hostile Press (HP) system developed by Birney, Burdick, and Teevan (1964). An exploratory investigation was conducted to determine the effect of aroused and neutral testing conditions on the amount of HP imagery and its intensity within the same group of Ss. The results indicated that HP scores increased significantly between the neutral and aroused conditions. Nevertheless, a dichotomy of the HP scores at the median indicated that the scores of Ss categorized Low HP under the neutral condition increased significantly under the aroused condition. HP scores of Ss categorized Hi HP under the neutral condition had significantly lower HP scores under the aroused condition. The results were discussed in terms of the FF S's interpretation of the situation and his defensive posture. (Author).

CONFIDENCE RATINGS AND LEVEL OF PERFORMANCE ON A JUDGMENTAL TASK. Jun 30 2020 A 4-alternative forced-choice test was administered to 96 Ss. S's task was to attempt to select the correct alternative from each test item and to indicate his degree of confidence in his choice on a 5-point rating scale. The objective was to compare the confidence assignments of Ss who did relatively well on the primary judgmental task with those of Ss who did poorly. It was found that Ss who performed poorly on the primary task (LP Ss) tended on the average to use lower confidence ratings than Ss who did relatively well (HP Ss). Although few used either high or low ratings exclusively, all Ss tended to use one end of the confidence scale much more frequently than the other. However, whereas HP Ss were fairly consistent in using the high end of the scale, LP Ss were about evenly divided between those using the high end and those using the low. For both groups, performance tended to be monotonically related to expressed confidence. In terms of measures developed by Adams and Adams, HP Ss made more 'realistic' confidence judgments than did LP Ss; however, there was no striking difference between groups in terms of differences in performance associated with step increases in expressed confidence.

**Two Fear of Failure Motives and Their Comparison in Relation to Persistence, Scores on Rotter's Internal-external Scale, and Attitudes Toward a Real Achievement Situation** Aug 13 2021 An experiment was conducted comparing Birney, Burdick, and Teevan's Hostile Press (HP) fear of failure with Heckhausen's Furchtmisserfolg (FM) fear of failure. The basic theme of the experiment is that HP is an achievement situation avoidance motive while FM is a motive which leads one to accept or approach the achievement situation but to work within that system to avoid failure rather than to achieve success. A correlative idea of this work is

that FM individuals see achievement outcomes as being their own responsibility while HP individuals see achievement outcomes as being caused by the environment. These views lead to three hypotheses: (1) That FM and HP Ss would have scores indicating internal and external orientations, respectively, toward the perception of the causes of outcomes and sources of reward as measured by Rotter's Internal-External Scale. (2) That FM and HP Ss would express these orientations as well as indicate relative approach and avoidance tendencies, respectively, in response to questionnaires concerning a real achievement situation (a test in a course in which all Ss were students). (3) That HP Ss, being avoidant of achievement situations, would not persist as long as FM Ss at a task which they thought to be hard but possible (which, in reality, was unsolvable). It was concluded that the general differences between HP and FM Ss which had been hypothesized had a good degree of validity, but that the extent of the effect of HP Ss' need for social approval had been underestimated. (Author).

**1969 Chevrolet Camaro SS** Dec 29 2022 In 1969, the Camaro with the SS package took Chevy Camaro performance and styling to another level. First, the Camaro carried updated sheet metal for an aggressive and eye-catching appearance, and the ultra-high-performance 427 big-block engines were available for the first time. As history proved, 1969 was the pinnacle of performance and styling for the first-generation Chevy Camaro. Author and muscle car expert Robert Kimbrough provides a comprehensive examination of the all-time classic 1969 Camaro SS in Volume No. 4 of CarTech's In Detail series. He delves into the design, manufacturing, and equipment of Chevrolet's premier pony car. For the first time in its history, the 1969 Camaro SS had a full slate of high-performance small-blocks as well as big-blocks to conquer the competition on the street and track. The engines included the 350, 375-hp 396, and 425-hp COPO 427 Camaros. The Camaro SS made such an impression, that it became the Indy 500 Pace Car once again in 1969. All In Detail Series books include an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, and an in-depth study of all hardware and available options, as well as an examination of where the car is on the market today. Also included is an appendix of paint and option codes, VIN and build-tag decoders, as well as production numbers.
