Retired from his long, successful career as an agent to many of the most famous and dynamic motivational speakers in the world, Bart Manning was happily enjoying his newfound freedom with his lovely wife, Mary. So why, one morning, did he find himself headed back to the little office that he had never given up? He didn't know. But as he sat at his dusty desk, he decided to go back into business. If God had sent him there, Bart told himself, he would wait for His plan to unfold. Then, at a crowded convention, he found his answer in the person of a handsome young man named Patrick Donne, whose deep, commanding voice spoke words of profound wisdom that electrified the audience. With the thrill of discovery, Bart recognized Donne's short speech as the best inspirational talk he had ever heard. Bart was soon caught up in the extraordinary realm that was Patrick's ordinary world, where even tragedy and sorrow became transforming experiences and remarkable things happened. This book presents a selection of empirical papers dealing with second and multiple language acquisition, in which qualitative research methodology is employed. Each of the studies reported in individual chapters is based on a solid theoretical background and an overview of studies in a given area. Although the main focus is on qualitative methods, some of the papers demonstrate the complementarity of quantitative and qualitative approaches in studying language acquisition. The 1934 State of the Union Address was given by the 32nd president of the United States, Franklin D. Roosevelt. It was the first State of the Union address to be given in January. Excerpt: "Now that we are definitely in the process of recovery, lines have been rightly drawn between those to whom this recovery means a return to old methods—and the number of these people is small—and those for whom recovery means a reform of many old methods, a permanent readjustment of many of our ways of thinking and therefore of many of our social and economic arrangements... A mysterious admission notice, Xiao Lin was forced to enter the Shuguang College, a college that targets colonial aliens. Xiaolin started a completely different university trip here. Elective courses: basic perception, basic sword mastery, primary pharmacy production...what? There is also the Dragon Language Elementary Course, the Orc Language ** exam? What kind of ghost is this, don't you know that I hate foreign languages the most! Semester exam: Sky City Attack and Defense, Death Castle Guard Battle, various simulation scenarios... What? Death must be deducted from the life value! Xiao Lin said that pressure is big! Summer practice: Open the door to a different world and start colonizing and ruling! Although there has been much published research on the benefits of distributed practice (Cepeda, Pashler, Vul, Wixted, & Rohrer, 2006) and the testing effect (Eisenkraemer, Jaeger, & Stein, 2013), very few studies are available regarding cumulative testing in college courses. Those available show a benefit to cumulative testing (Lawrence, 2014; Rohm, Sparzo, &

Bennett, 1986; Szpunar, McDermott, & Roediger, 2007). As baseline information for a future study of cumulative testing, the current study investigated how well 150 college students recalled previous material when given unannounced cumulative items on a final exam. (Cumulative items were not counted toward students' grades.) Four sections of an undergraduate human development class formed the sample. Two professors taught two sections each and administered separately-developed exams throughout the semester. For the final exam, each professor chose ten multiple-choice items from each of the first and second tests of the semester to include on the final exam. The number of students missing the items on the final was compared to the number missing the same items earlier in the semester. A paired t-test showed a statistically significant increase in the overall number of students missing the items on the final exam. The size of the difference did not depend on whether the items were from Test 1 or Test 2, although it did differ by professor, with an effect size of 0.38 for Professor A and 1.15 for Professor B. A Pearson's correlation between the overall number of students missing each item before and on the final was 0.51, indicating that items previously missed by larger numbers of students were not necessarily the ones missed by the most students on the final exam. This correlation differed by professor, as well (0.65 for Professor A; 0.45 for Professor B).

From how to write great essays and succeeding at university, to writing your undergraduate dissertation and doing postgraduate research, SAGE Study Skills help you get the best from your time at university. Visit the SAGE Study Skills hub for tips, resources and videos on study success! This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence-based pedagogies in higher education, at something a level approaching large-scale impact. By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation, we aim to change the conversation and focus on how we work and learn together - i.e. extending the implementation and knowledge of co-design methods. In this first edition of our Research Topic on Active Learning, we highlight two (of the three) types of publications we wish to promote. First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the "practice pull" that we see as a necessary counterbalance to "knowledge push" in a more productive pedagogical innovation ecosystem based on research-practitioner partnerships. Second are studies empirically examining the implementations of evidence-based designs in

naturalistic settings and under naturalistic conditions. Interestingly, the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as “in-betweens” straddling the two worlds. As a result, these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions, we will add to this collection a third type of publication -- design profiles. These will present practitioner-developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners, instructional designers and researchers alike. We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner-researcher interactions that promote co-design in pedagogical innovation.
