**Family Storytelling** Sep 13 2021 Stories and storytelling are one of the primary ways that families and family members make sense of both everyday and difficult events, create a sense of individual and group identity, remember, connect generations, and establish guidelines for family behavior. With so many important functions, storytelling is a significant but still understudied communicative process for the family. Family Storytelling focuses on the ways in which stories are told in and about family in order to provide insight into the processes, functions, and consequences of family storytelling. This collection of empirical articles illuminates various ways in which family storytelling affects and reflects the negotiation of individual and relational identity in the family, teaches important family lessons, and helps members make sense of and cope with difficulty. Each of these functions is explored through both scientific and interpretive investigations, thus showcasing the contributions that research on family storytelling from different paradigms make to our understanding of the family. This book was originally published as a special issue of the Journal of Family Communication.

Communicating Science Effectively Oct 22 2019 Science and technology are embedded in virtually every aspect of modern life. As a result, people face an increasing need to integrate information from science with their personal values and other considerations as they make important life decisions about medical care, the safety of foods, what to do about climate change, and many other issues. Communicating science effectively, however, is a complex task and an acquired skill. Moreover, the approaches to communicating science that will be most effective for specific audiences and circumstances are not obvious. Fortunately, there is an expanding science base from diverse disciplines that can support science communicators in making these determinations. *Communicating Science Effectively* offers a research agenda for science communicators and researchers seeking to apply this research and fill gaps in knowledge about how to communicate effectively about science, focusing in particular on issues that are contentious in the public sphere. To inform this research agenda, this publication identifies important influences " psychological, economic, political, social, cultural, and media-related " on how science related to such issues is understood, perceived, and used.

**Gabriel Tarde On Communication and Social Influence** Aug 25 2022 Gabriel Tarde ranks as one of the most outstanding sociologists of nineteenth-century France, though not as well known by English readers as his peers Comte and Durkheim. This book makes available Tarde's most important work and demonstrates his continuing relevance to a new generation of students and thinkers. Tarde's landmark research and empirical analysis drew upon collective behavior, mass communications, and civic opinion as elements to be explained within the context of broader social patterns. Unlike the mass society theorists that followed in his wake, Tarde integrated his discussions of societal change at the macrosocietal and individual levels, anticipating later twentieth-century thinkers who fused the studies of mass communications and public opinion research. Terry N. Clark's introduction, considered the premier guide to Tarde's opus, accompanies this important work, reprinted here for the first time in forty years.

**Parchment, Paper, Pixels** Sep 25 2022 Technological revolutions have had an unquestionable, if still debatable, impact on culture and society—perhaps none more so than the written word. In the legal realm, the rise of literacy and print culture made possible the governing of large empires, the memorializing of private legal transactions, and the broad distribution of judicial precedents and legislation. Yet each of these technologies has its shadow side: written or printed texts easily become static and the textual practices of the legal profession can frustrate ordinary citizens, who

may be bound by documents whose implications they scarcely understand. *Parchment, Paper, Pixels* offers an engaging exploration of the impact of three technological revolutions on the law. Beginning with the invention of writing, continuing with the mass production of identical copies of legal texts brought about by the printing press, and ending with a discussion of computers and the Internet, Peter M. Tiersma traces the journey of contracts, wills, statutes, judicial opinions, and other legal texts through the past and into the future. Though the ultimate effects of modern technologies on our legal system remain to be seen, *Parchment, Paper, Pixels* offers readers an insightful guide as to how our shifting forms of technological literacy have shaped and continue to shape the practice of law today.

Tables and lists of sample sentences and phrases aid in composing different sections of a scientific paper, review article, or grant proposal. Thorough attention to research articles advises readers on composing successful manuscripts for publication in peer-reviewed journals from initial drafting to the response to reviewers. Comprehensive coverage of grant writing guides scientists through the entire process of applying for a grant, from the initial letter of inquiry to proposal revision and submission.

*News for the Rich, White, and Blue* Feb 16 2022 As cash-strapped metropolitan newspapers struggle to maintain their traditional influence and quality reporting, large national and international outlets have pivoted to serving readers who can and will choose to pay for news, skewing coverage toward a wealthy, white, and liberal audience. Amid rampant inequality and distrust, media outlets have become more out of touch with the democracy they purport to serve. How did journalism end up in such a predicament, and what are the prospects for achieving a more equitable future? In *News for the Rich, White, and Blue*, Nikki Usher recasts the challenges facing journalism in terms of place, power, and inequality. Drawing on more than a decade of field research, she illuminates how journalists decide what becomes news and how news organizations strategize about the future. Usher shows how newsrooms remain places of power, largely white institutions growing more elite as journalists confront a shrinking job market. She details how Google, Facebook, and the digital-advertising ecosystem have wreaked havoc on the economic model for quality journalism, leaving local news to suffer. Usher also highlights how the handful of likely survivors—well-funded media outlets such as the *New York Times*—increasingly appeal to a global, “placeless” reader. *News for the Rich, White, and Blue* concludes with a series of provocative recommendations to reimagine journalism to ensure its resiliency and its ability to speak to a diverse set of issues and readers.

**Intergroup Communication** May 22 2022 "The social scientific study of communication has hitherto largely focused on communication between individuals. This book concentrates on the important and interesting topic of how membership of a group -racial, ethnic, social or sexual, for example - affects communication with members of another group. It integrates research and theory on intergroup behaviour with research and theory on communication, drawing on the findings of

both European and North American scholars, which have in the past developed separately. The chapters are arranged to begin with the most general treatments and to end with the most specific, with an introductory chapter outlining the field, and a final chapter integrating the contents of the book. In addition to presenting an original contribution, each chapter presents a concise and up-to-date survey of research and theory."--Back cover.

Writing and Publishing Scientific Papers Oct 15 2021 Gábor Lövei's scientific communication course for students and scientists explores the intricacies involved in publishing primary scientific papers, and has been taught in more than twenty countries. Writing and Publishing Scientific Papers is the distillation of Lövei's lecture notes and experience gathered over two decades; it is the coursebook many have been waiting for. The book's three main sections correspond with the three main stages of a paper's journey from idea to print: planning, writing, and publishing. Within the book's chapters, complex questions such as 'How to write the introduction?' or 'How to submit a manuscript?' are broken down into smaller, more manageable problems that are then discussed in a straightforward, conversational manner, providing an easy and enjoyable reading experience.

Writing and Publishing Scientific Papers stands out from its field by targeting scientists whose first language is not English. While also touching on matters of style and grammar, the book's main goal is to advise on first principles of communication. This book is an excellent resource for any student or scientist wishing to learn more about the scientific publishing process and scientific communication. It will be especially useful to those coming from outside the English-speaking world and looking for a comprehensive guide for publishing their work in English.

Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video,

and blogging are shown not only as topics of research but also as means of collecting and analyzing data.
