Naval Anti-Aircraft Guns and Gunnery Aug 07 2021 This book does for naval anti-aircraft defense what Friedman's Naval Firepower did for surface gunnery – it makes a highly complex but historically crucial subject accessible to the layman. It traces the growing aerial threat from its inception in WWI and the response of each of the major navies down to the end of WWII, highlighting in particular the underestimated danger from dive-bombing. The work considers what effective AA fire-control required, and how well each navy's systems actually worked, analyzing the weapons, how they were placed on ships, and how this reflected the tactical concepts of naval AA defense. All important guns, directors and electronics are represented in close-up photos and drawings, and lengthy appendices detail their technical data. It is, simply, another superb contribution to naval technical history by its leading exponent.

Ahoy! Quarterdeck (with Sea Shanties supplement) Mar 22 2020 Originally published as IRMA QUARTERDECK REPORTS but re-released with new illustrations and, in the paperback edition, with sea shanties, this funny book is a series of boating anecdotes about Irma and her bumbling husband Ralph ("I can't believe I lost the anchor") Quarterdeck in their many boating adventures and mishaps. One reviewer says the book is as informative as Chapman's famous manual, but more fun. Readers will find plenty of laughs in this book and at the same time learn a great deal of boating fundamentals.

Proceedings of the 2nd Conference on Engine Processes Feb 01 2021 As the combustion engine looks set to remain the dominant energy conversion unit in vehicle powertrains in the medium term, either in combination with electrical components or on its own, attention will need to be paid to continue improving its efficiency in the future. The high development depth of today's combustion engines means that it is becoming increasingly difficult to achieve significant efficiency improvements by simple means. On the search for these improvements, the focus has shifted to inner-engine processes, for instance charge cycles including the charging system, the mixture formation including injection, combustion and kinematic conversion of the energy within the fuel. Our 2nd conference 'Engine processes' aims to offer all developers a platform to discuss the latest technological developments in the field of inner-engine process control, and encourage new paths to be taken. We believe that the program for this conference is a sound foundation for this endeavour. Da der Verbrennungsmotor auch mittelfristig die dominierende Energiewandlungseinheit im Antriebsstrang von Kraftfahrzeugen sein wird, entweder im Verbund mit elektrischen Komponenten oder aber als alleiniger Antrieb, muss der Verbesserung von dessen Wirkungsgrad auch in Zukunft erhebliche Aufmerksamkeit zu Teil werden. Aufgrund

der hohen Entwicklungstiefe, die heutige Verbrennungsmotoren aufweisen, wird es immer schwerer, deutliche Wirkungsgradverbesserungen auf einfachem Weg zu erreichen. Auf der Suche nach diesen Verbesserungen rücken die innermotorischen Prozesse immer mehr in den Fokus, hierzu zählen der Ladungswechsel inkl. Aufladesystem, die Gemischbildung inkl. Einspritzung, die Verbrennung sowie die kinematische Wandlung der im Kraftstoff gebundenen Energie. Unsere 2. Tagung „Motorische Prozesse“ soll nun allen Entwicklern als Austauschforum zu neuesten technologischen Entwicklungen auf dem Gebiet der innermotorischen Prozessführung dienen und dazu anregen neue Wege zu beschreiten. Wir sind überzeugt, mit dem vorliegenden Tagungs-Programm hierzu einen sehr guten Beitrag leisten zu können.
