"clean eating" is, he'll act confused and tell you it probably means not to eat things off the floor. What do you think of when you hear "clean eating"? Do you imagine some locally grown organic lettuce leaves sitting sadly on a plate? Do you think of green juice or health supplements? Yoga and detox diets? Well, you won't find any of that in this book. Instead, we're going to focus on healthy and more realistic ways of eating - common sense that isn't all that common anymore. Clean eating is a lifestyle and an attitude more than it is a set of forbidden foods. Though some might disagree, you can eat meat, wheat, and dairy and still have a "clean" diet, and you most certainly don't need to spend a lot of money on "superfoods". During this challenge, you'll try to let go of the mythical ideal diet; we will focus on continuous improvement rather than perfection. And, most importantly, flexibility and joy rather than deprivation. The only one who knows if a diet is good for you or not is your own body. So ask it! During the 21 days of the challenge, we'll look at opportunities to clear away foods that are hindering your health and replace them with better ones. You will be amazed by how much impact healthy eating will have on your overall well-being and the way you look. Equine nutrition' gives insight in updated feed evaluation systems based on net energy, global amount of amino acids, and

feed intake. These systems allow accurate comparison of the nutritive value of feeds, the formulation of well-balanced rations to achieve production or utilisation goals, and the prediction of equine performance based on the quantity and quality of the ration. 'Equine nutrition' provides an update of the nutrient requirements for all categories of equine. Tables of recommended allowances based on long term feeding trials carried out at INRA are proposed. These recommendations and the simple approach to formulation of rations based on the use of a maximum amount of forage have been successfully tested in the fields. The importance of grass intake during summer for the different categories of equines is evaluated and grazing management is described. Feed allowances and feeding practices are proposed in respect of health and behaviour of the equine and of the preservation of environment. The feed tables list 169 roughages and 71 concentrates feeds. Data have been derived from digestion trials on horses, carried out at INRA and measurements of voluntary intake for most of the forages. This book also deals with several distinct pedagogic tools dedicated to end-users: 'equination', a guide to 'body condition scoring in horse' and 'Equine Rami' for horse grazing and farming management.
